

Employer Due Diligence Report

BDO India / BDO Digital

Solution Architect • Mumbai

COMPANY	DIVISION	ROLE
BDO India	BDO Digital	Solution Architect

Company → Division → Role → Candidate decision

Research cut-off: 20 September 2026 | Prepared by TrustInWork | Candidate decision brief

Decision lens

Public evidence supports an established digital business and relevant technology capabilities. The candidate's decision should turn on the exact team, reporting line, architecture authority, commercial model and reason for the vacancy. These details require direct confirmation.

01 Executive decision snapshot

Employer Due Diligence Snapshot

Qualitative assessments describe available evidence, not a numerical employment risk score or forecast.

What stands out

BDO Digital describes offerings across cloud, applications, data and AI, security and transformation. BDO India documents Microsoft Solutions Partner and Azure Expert MSP credentials. A publicly visible Mumbai Solutions Architect posting covers lending platforms and integrations. Together these support role relevance, but do not establish the conditions of a particular team. [1–3]

Decision implication

Proceed to focused conversations with the hiring manager and a future peer. Request concrete examples of architecture decisions, project load and recent team changes before making an irreversible career move.

02 Opportunity signals and areas to validate

OPPORTUNITY SIGNALS	AREAS TO VALIDATE
- Established digital services - Microsoft / Azure credentials - Relevant Mumbai architect posting - Broad client and technology exposure	- Exact team and reporting line - Architecture decision authority - Workload and utilization - Why the position is open

03 Recent developments

12-month timeline | September 2025–September 2026

The 2025 Microsoft Solutions Partner announcement predates this 12-month window and is treated as background credential, not a new 2026 event. [2]

Company and division view

BDO Digital is a formal service offering within BDO India. Its public catalogue spans consulting through implementation and managed services, with product and solution lines. This is a meaningful sign of technology relevance for a Solution Architect. It is not a proxy for utilization, profitability or job security in the Mumbai team. [1,8]

Workforce and legal review

The reviewed public material did not establish a reliable BDO Digital India headcount trend, attrition rate or team-level layoff history. No material legal finding identified in this dry run changes the role assessment; any legal matter should be tied to the employing entity and role before being included in a final employment risk conclusion.

04 Employee experience signals

Qualitative spectrum | no percentages inferred

Employee reviews are self-selected, may be outdated and often omit the relevant business unit. A single allegation is a weak signal, not an established finding.

05 Solution Architect operating scope

Likely touchpoints inferred from the public lending/LOS/LMS posting [3]

The posting describes end-to-end architecture across lending platforms, digital channels, core banking, documents, enterprise services and third parties. Confirm which systems this exact opening covers and whether the architect has approval authority or an advisory role. [3]

Evidence-strength matrix

VERIFIED FACT	Published company material / job posting
STRONG SIGNAL	Several aligned public observations
WEAK SIGNAL	Individual, self-selected accounts
NOT VERIFIED	Team-level private information

Evidence tier is about support for a claim, not a verdict on the employer.

06 Six critical unknowns before resigning

01 POSITION ORIGIN
New or replacement?

02 DECISION RIGHTS
Who approves designs?

03 TEAM MODEL
Manager and team size?

04 COMMERCIAL MODEL
Utilization and project load?

05 RECENT CHANGE
What shifted in 12 months?

06 SUCCESS
Six and twelve month goals?

07 Questions that can change the decision

GROUP	ASK THE HIRING TEAM
Role	Is this new or replacement hiring? What happened to the previous person? Which service line owns it?
Authority	What can I approve independently? Who has final architecture sign-off? Give a recent example.
Team	Who is the manager? How many architects and engineers are in the relevant group? May I speak with a future peer?
Commercial model	What utilization target applies? How many engagements run at once? What travel is typical?
Change and success	What changed in the team over 12 months? What measurable outcomes define success at six and twelve months?

Suggested decision gate

Ask for a written role description, reporting line and compensation structure. Compare answers from HR, the hiring manager and a future peer. Any material inconsistency should be resolved before acceptance.

08 Research coverage and method

SOURCE FAMILY	COVERAGE IN THIS DRY RUN	LIMITATION
Official company material	Digital services, partner credentials, products [1,2,5,8]	Company-authored; describes positioning, not lived conditions.
Hiring material	Mumbai architect posting [3]	May be a different opening; posting can change.
Professional/social	Leadership signal [4]	Announcement does not establish team outcomes.
Employee reviews	AmbitionBox and Indeed examples [6,7]	Self-selected and often not division-specific.
Public records / press	Screened for material role relevance	No role-specific adverse conclusion established.

Method and limitations

Findings distinguish published facts, reasonable signals, anonymous commentary and unknowns. Public sources cannot verify private financials, a specific manager, internal team morale or employment terms. Source pages and job postings may change after the research date. This brief supports the candidate’s own diligence and is not a recommendation to join or decline.
